

THE SYSTEM

Gazelle context — what lives where · 30 July 2026

THE REPO

~/Sites/gazelle-horizon — everything lives here

CLAUDE.md

the rulebook — loads itself every session

docs/build-manual.md

how we build (auto-loaded by CLAUDE.md)

STATUS.md

NOW — open tasks, who's blocking what

DONE.md

FOREVER — everything finished & found

PROJECT-CONTEXT.md

the 1 file you drag to claude.ai

gazelle-context-...md

old monolith — archive, read only

git = automatic history of every change, every day

reads directly

CLAUDE CODE

(terminal — does the work)

- Reads the repo files directly
- Updates STATUS + DONE for you
- Commits + pushes to GitHub

YOU drag 1 file

CLAUDE.AI / DESKTOP

(chats like this — does the thinking)

- Reads PROJECT-CONTEXT.md
- from project knowledge
- Writes digests of what we find

THE DAILY LOOP

1 WORK

build, chat,
fix, discover

2 digest please

if the findings
were in a chat

3 /update-context

Claude Code logs
+ commits + pushes

4 DRAG

PROJECT-CONTEXT.md
→ project knowledge

That's it. 2–3 minutes, everything saved, both Claudes up to date.

THE COMMANDS

Copy these — nothing else to remember

EVERY SESSION

TERMINAL

cd ~/Sites/gazelle-horizon && claude

start Claude Code in the right place (always)

CHAT

digest please

end of a chat like this → I hand you a block to copy

CLAUDE CODE

/update-context

logs the session: DONE + STATUS + commit + push

CLAUDE CODE

/update-context <paste digest>

same, but folding in a chat's digest

FINDER

drag PROJECT-CONTEXT.md

→ project knowledge, replace old one (after every update)

THEME WORK (unchanged from before)

TERMINAL

gazelle

run the dev server / preview at 127.0.0.1:9292

TERMINAL

gazelle-pull

BEFORE any editor session — then commit (pull-clobber!)

TERMINAL

gazelle-push

push theme changes live to GSD Gazelle Build

IF SOMETHING SEEMS WRONG

CLAUDE CODE

push target?

canary: expect “GSD Gazelle Build #205873021277”

TERMINAL

git status

trust the filesystem, not the summary

3 RULES

- A chat isn't finished until you've said “digest please” and pasted it across.
- Never hand-edit STATUS.md or DONE.md — /update-context is the only writer.
- After every update: one drag. Repo = truth, claude.ai = the copy.
